Topic: Split route logic

Stan Bankras edited this page on Apr 7 · 6 revisions

Backend topic: Split route logic

This topic was worked on by Stan Bankras

A team project can become quite a mess if everyone works in the same server.js or index.js file: the file quickly adds a lot of lines and it takes long to read and understand what is happening. That's why I wanted to separate as much as possible

- Moving route logic to other files than the server
- Exporting the database connection from one central place

Moving route logic to other files than the server

In Javascript you can require other javascript files using require(). This can be used to import different files that host routes in the server.js to clear up some space:

```
const matchRouter = require('./routes/matches');
const chatRouter = require('./routes/chatting');
const authentication = require('./routes/authentication');
```

documentatie (wiki)

Project-tech

- Samenwerking **op GitHub** (code, docs)
- **GitHub repo** zelf (configuratie, readme)
- **Coding standaarden**
- **Prototype** van de dating app

	1-2	3-4	5-6	7-8	9-10
Collaboration	The team doesn't use GitHub	The team uses version control but not all social features of GitHub	The team uses version control and the social features of GitHub to work on the project	The team worked with branches, pull requests and issues to collaborate easily	Each team member has equal contributions and tasks are delegated
Evaluation	Team members didn't review any code	Team members looked at some code but made no comments	Team members reviewed each other's code and processed issues and bugs other people assigned to them	Team members reviewed code and actively refactor code to make the application more coherent	Team members also have complex technical discussions and comments of
Application	The application doesn't work; there are errors and warnings	The application works but is incomplete	The team created a working dynamic prototype of a matching application	The application is advanced and is technically complex; it's well designed visually	The application is fantastic and the feature is complex. The team took special care of the interface and the user
Quality	The project is handed in documented, on time, working without technical problems, and on GitHub	The code is readable, consistent and the code, project, and process are partially documented	Code adheres to standards; docs cover the process and what the project is and does; a live version is deployed	Code is good and docs are more useful and professional	Code is well structured logically

Assignments

Topic

topic

Pick one topic from the list below and work on that topic for your team assessment.

Synopsis

- Homework
- Time: 10:00h
- Goals: subgoal 10,
- Due: before week 7

Description

This and next week you'll pick 1 topic (2 in total) to work on for the team assessment. This can be things like security enhancements, application structure or performance optimizations.

→ [List of topics you can pick from](#)

Something not on the list? Pitch a topic to your teacher!

Hand-in

1. Push your changes:

Hand in your progress in your repository on GitHub under your username.

2. Create an issue:

Mark this assignment as complete by opening an issue on our [GitHub issue tracker](#). Fill in the issue template with the correct information. Include what you did in the description of the issue.

Pick (minimum) one
topic from the
list

Add your own!

Front-end

- Work on **the interface (visual)**
- **Call API's** (request additional data)
- Build your **front-end enhanced component**

Teamrepo

Advies; **start from scratch** and create a new github repo.

- ❖ Kies een *git leader* (die host de repo)
- ❖ Bepaal met welk *concept* je verder gaat
- ❖ Bepaal de *code standaarden als team*
- ❖ Bepaal de *git strategy*
- ❖ Maak een *taakverdeling* (wie werkt waaraan?)

Network graph

Timeline of the most recent commits to this repository and its network ordered by most recently pushed to.

Use GitHub over other communication. GitHub = public
so we as instructors can see what you worked on.

Samenwerking tips

Advies; maak aan elkaar **inzichtelijk** waar je aan werkt

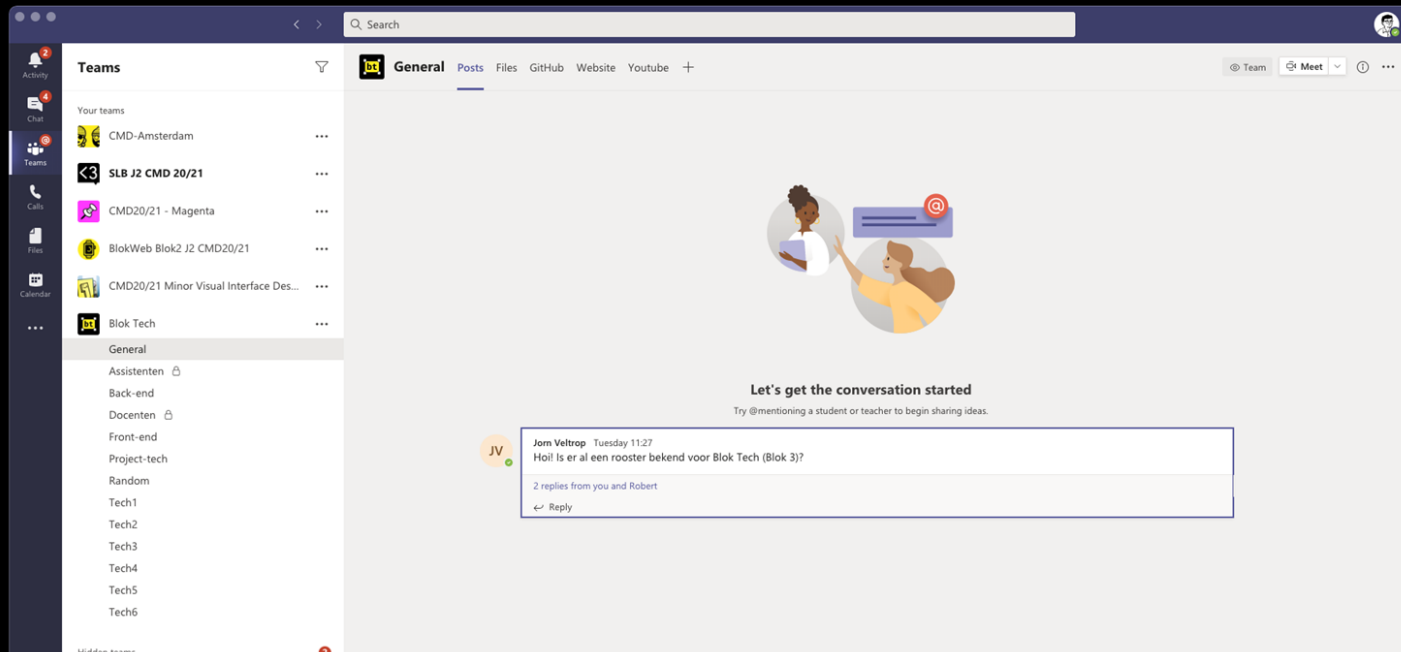

- ❖ **Assign elkaar** aan issues en taken
- ❖ Werkt met branches en reviews (niet 'opeens' mergen)
- ❖ **Commit early and often**
- ❖ Kies iets om aan te werken **wat tof is**

Samenwerking tips

Advies; maak aan elkaar **inzichtelijk** waar je aan werkt

- ❖ **Assign elkaar** aan issues en taken
- ❖ Werkt met branches en reviews (niet 'opeens' mergen)
- ❖ **Commit early and often**
- ❖ Kies iets om aan te werken **wat tof is**

Clearly document and show your contributions. Trough wikis, commits, issues etc. You explain to us what you did.

**Zelfde private channels als de support groups
maar dan met andere members als team.**

Brightspace inleveren

Aan het eind dus inleveren;

- ❖ Link naar de **teamrepo (applicatie)**
- ❖ Link naar **documentatie (wiki)**

Wat te doen?

Hop op een call met elkaar en denk na over:

- ❖ Kies een *git leader* (die host de repo)
- ❖ Bepaal met welk *concept* je verder gaat
- ❖ Bepaal de *code standaarden als team*
- ❖ Bepaal de *git strategy*
- ❖ Maak een *taakverdeling* (wie werkt waaraan?)

En straks bespreken bij de project-tech les.

Exit;

👋 Greetings from
Joey the Sea otter
